The Academy's £16.5 million Campaign aims to create a Forum for Engineering and attract more young people to engineering roles. We are *making things better* for society.

Through strategic influence, practical actions and partnership, the Academy will move engineering to the centre of society, for the benefit of all.

Creating a Forum for Engineering

Target: £6.5 million

With a superb location and ample public space, our redeveloped building at 3 Carlton House Terrace will help put engineering at the heart of the UK's engineering future.

What's the need?

The Forum will bring people together, with the Academy contributing its leadership role across all fields of engineering. The Forum is needed to:

- raise the stature of engineering
- highlight the contribution engineering makes to a strong society
- encourage new engineering talent at every level.

What's on offer?

The Forum will be a respected and neutral venue where the Academy:

- fosters smart discussion of global issues
- provides expert advice on engineering matters
- showcases engineering achievements
- inspires the next generation of engineers.

What's the project?

- a new 150-seat lecture theatre
- inspiring exhibition/meeting spaces
- a distinctive garden entrance
- renewal of building services.

Education and Engagement

Target: £10 million

What's the need?

Attracting more young people to all levels of engineering is essential to:

- UK prosperity
- the quality of our everyday lives
- finding solutions to global challenges.

Engineering that is visible to society and sensitive to its opinions and concerns ensures:

- inclusion of engineering in relevant national and global policymaking
- informed debate and dialogue.

What do we offer?

The Academy and its Fellowship have the know-how, authority and ambition to:

- help shape policies relevant to nurturing engineering talent
- leverage and coordinate the delivery of programmes nationally

- bring together the engineering community to increase its influence and impact
- promote links between engineering, government and wider society.

What are the projects?

- improving engineering education
- diversifying the talent pool
- developing the vital role of technicians
- encouraging innovation
- building links between industry and academia
- strengthening our international links and engineering in Africa.
